

IT Infrastructure Manager

Purpose:

The IT Infrastructure Manager is responsible for maintaining and enhancing the stadium's core IT infrastructure, ensuring reliability, security, and scalability of networks, servers, and systems.

Key Responsibilities:

- Manage and monitor the stadium's IT infrastructure, including networks, servers, and cloud systems.
- Oversee the implementation of IT projects, upgrades, and business continuity planning.
- Ensure network security, data backup, and disaster recovery processes are robust and tested.
- Manage third-party IT contractors who deliver network, security, and infrastructure services.
- Ensure all IT systems comply with data protection and privacy laws.
- Collaborate with event technology teams to ensure IT supports event connectivity (e.g., Wi-Fi, kiosks).
- Maintain IT infrastructure budgets and optimize resource use.

Experience Minimum Requirements	Education Minimum Requirements
7+ years managing IT infrastructure, with leadership experience.	A Bachelor's degree in information technology, Computer Science, or related field is required.
